---

## TECHNICAL PROJECTS

**DM Mapper** - [YouTube Demo](#) | [Front End Github](#) | [Back End Github](#)

Allows users to build a complex interconnected fictional world in an organized and easily traversable fashion.

- Implemented JSON Web Tokens for server side auth.
- Utilized Bcrypt to encrypt the users information both server and client side.
- Used ActiveRecord to create complex table relationships on the backend server.
- Introduced React Hooks to reduce unnecessary classes and improve readability.

**BibFox** - [YouTube Demo](#) | [Front End Github](#) | [Back End Github](#)

Allows users to build and maintain a virtual shelf of books that they currently own and find the locations of library share kiosks on Google Maps.

- Google Maps API and Google-Map-React library to customize the visuals of Google Maps.
- SASS to organize and improve the readability of CSS styling.
- React Router to give the appearance of a multi-page app.
- Followed the MVC architectural pattern and RESTful routing conventions

**Board Game MeetUp** - [YouTube Demo](#) | [Front End Github](#) | [Back End Github](#)

Brief description of the app's functionality and purpose

- Custom built RESTful API backend to store information
- Built in Vanilla JS to solidify JS fundamentals

---
